IN THE CLAIMS:

Please cancel Claims 1-121 without prejudice or disclaimer.

Claims 1-121 (Canceled).

122. (Original) A medical kit comprising a sterilized package containing a sterilized length of suction hose, the suction hose having an inner diameter of at least about 8 millimeters.

123. (Original) The medical kit according to Claim 122, wherein the length of suction hose includes first and second ends, and first and second female adapters connected to the first and second ends, respectively.

Please add new Claims 124-133 as follows:

124. (New) The medical kit according to Claim 123, wherein the first female adapter is configured to be connectable with an outlet of a suction device, the outlet having an inner diameter of about 6 millimeters.

125. (New) The medical kit according to Claim 124, wherein the suction device comprises a hand-held wound aspiration device.

126. (New) The medical kit according to Claim 125, wherein the hand-held wound aspiration device is configured to remove tissue and bone debris from a wound with suction, and to guide the debris into the suction hose.

127. (New) A medical suction hose kit comprising a sterilized package containing a sterilized length of suction hose, the suction hose having first and second hose ends and a first hose inner diameter, at least a first connector disposed at the first end, the first connector having a first connector end defining first connector inner diameter that is about the same as the first hose inner diameter, the first connector having a second connector inner diameter that is smaller than the first connector inner diameter.

128. (New) The medical kit according to Claim 127, wherein the second connector inner diameter is about 6 millimeters and the first connector inner diameter is about 8 millimeters.

129. (New) The medical kit according to Claim 127, wherein the suction hose is coiled within the sterilized package.

130. (New) The medical kit according to Claim 127, wherein the suction hose is configured to draw tissue and bone debris from a wound under vacuum.

131. (New) The medical kit according to Claim 127, wherein the first connector is configured to be connectable with an outlet of a suction device.

132. (New) The medical kit according to Claim 131, wherein the suction device comprises a hand-held wound aspiration device.

133. (New) The medical kit according to Claim 132, wherein the hand-held wound aspiration device is configured to remove tissue and bone debris from a wound with suction, and to guide the debris into the suction hose.
